

Weed Management in Rice

Kassim Al-Khatib

University of California - Davis

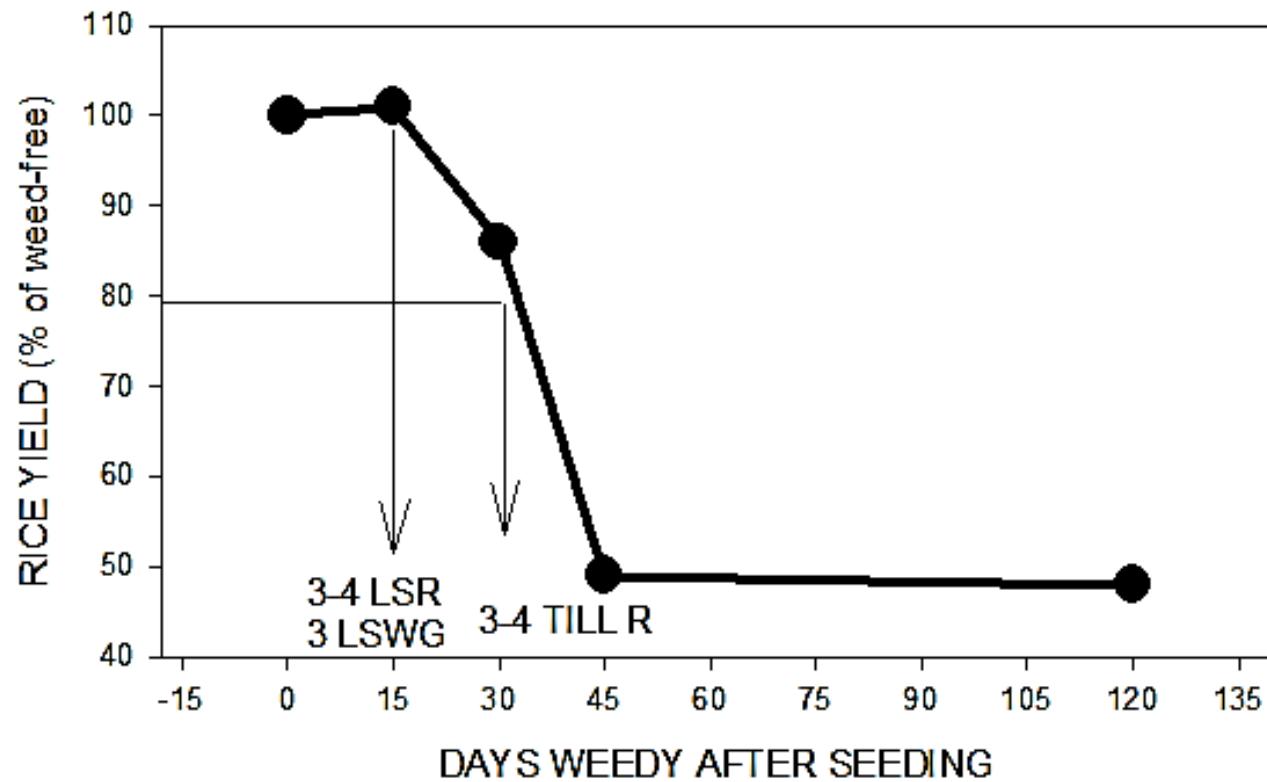

What Rice Farmers Say About Weeds

- Weeds is rank as 1st or 2nd problem in rice.
- Weed management in rice is challenging, complex, expensive, and regulated.
- Herbicide is the preferred method of controlling weed and it is the first and probably the last line of defense.
- Farmers are not quit sure if herbicides are now working well – resistant weeds
- Herbicide program vary between fields, no base program
- Less water means more weeds and more herbicides

Rice Yield Loss from Heavy, Season-long Weed Interference

Weed Species	Potential Yield Loss (%)
Barnyardgrass	82
Bearded sprangletop	36
Ducksalad	21
Eclipta	10

Effect of Late Watergrass Competition on Rice Yields

Chemical Weed Management

Challenging, Complex, Expensive, and Regulated

California Rice Weeds - Grasses

Barnyardgrass
Echinochola crus-galli

Early Watergrass
E. oryzoides

Late Watergrass
E. Phyllopogon

Bearded Sprangletop
Leptochloa fascicularis

Junglerice, *Echinochloa colona*

California Rice Weeds - Sedges

Ricefield Bulrush
Schoenoplectus mucronatus

Smallflower Umbrella Sedge
Cyperus difformis

California Rice Weeds -Broadleaves

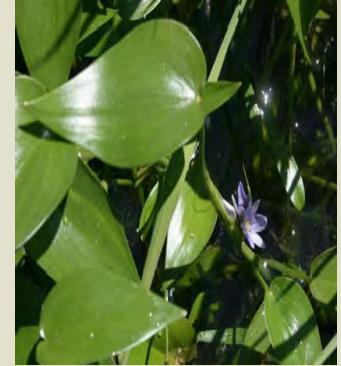

California Arrowhead
Sagittaria montevidensis

Gregg's Arrowhead
Sagittaria longiloba

Redstem
Ammannia species

Monochoria
Monochoria vaginalis

Ducksalad
Heteranthera limosa

Waterhyssop
Bacopa rotundifolia

Common Waterplantain
Monochoria vaginalis

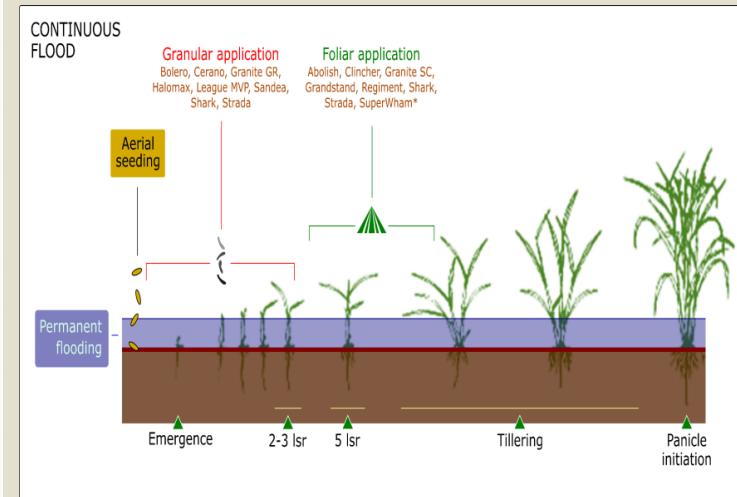

Rice Herbicide

Common name	Trade name	MOA
Bensulfuron	Londax®	ALS inhibitor
Bispyribac-sodium	Regiment®	ALS inhibitor
Halosulfuron	Sandeal®, Sempra	ALS inhibitor
Penoxsulam	Granite®	ALS inhibitor
Imazasulfuron	League MVP	ALS inhibitor
Orthosulfamuron	Strada	ALS inhibitor
Carfentrazone	Shark H2O®	PROTOX inhibitor
Clomazone	Cerano®, Bombard®	Carotenoid biosynthesis inhibitor
Cyhalofop-butyl	Clincher®	ACCase inhibitor
Pendimethalin	Prowl H2O®	Tublin inhibitor
Propanil	Stam®, SuperWham®	Photosystem II inhibitor
Thiobencarb	Abolish®, Bolero®	VLCFA (Very long chain fatty acids)
Triclopyr	Grandstand®	Synthetic auxin

Rice Herbicide

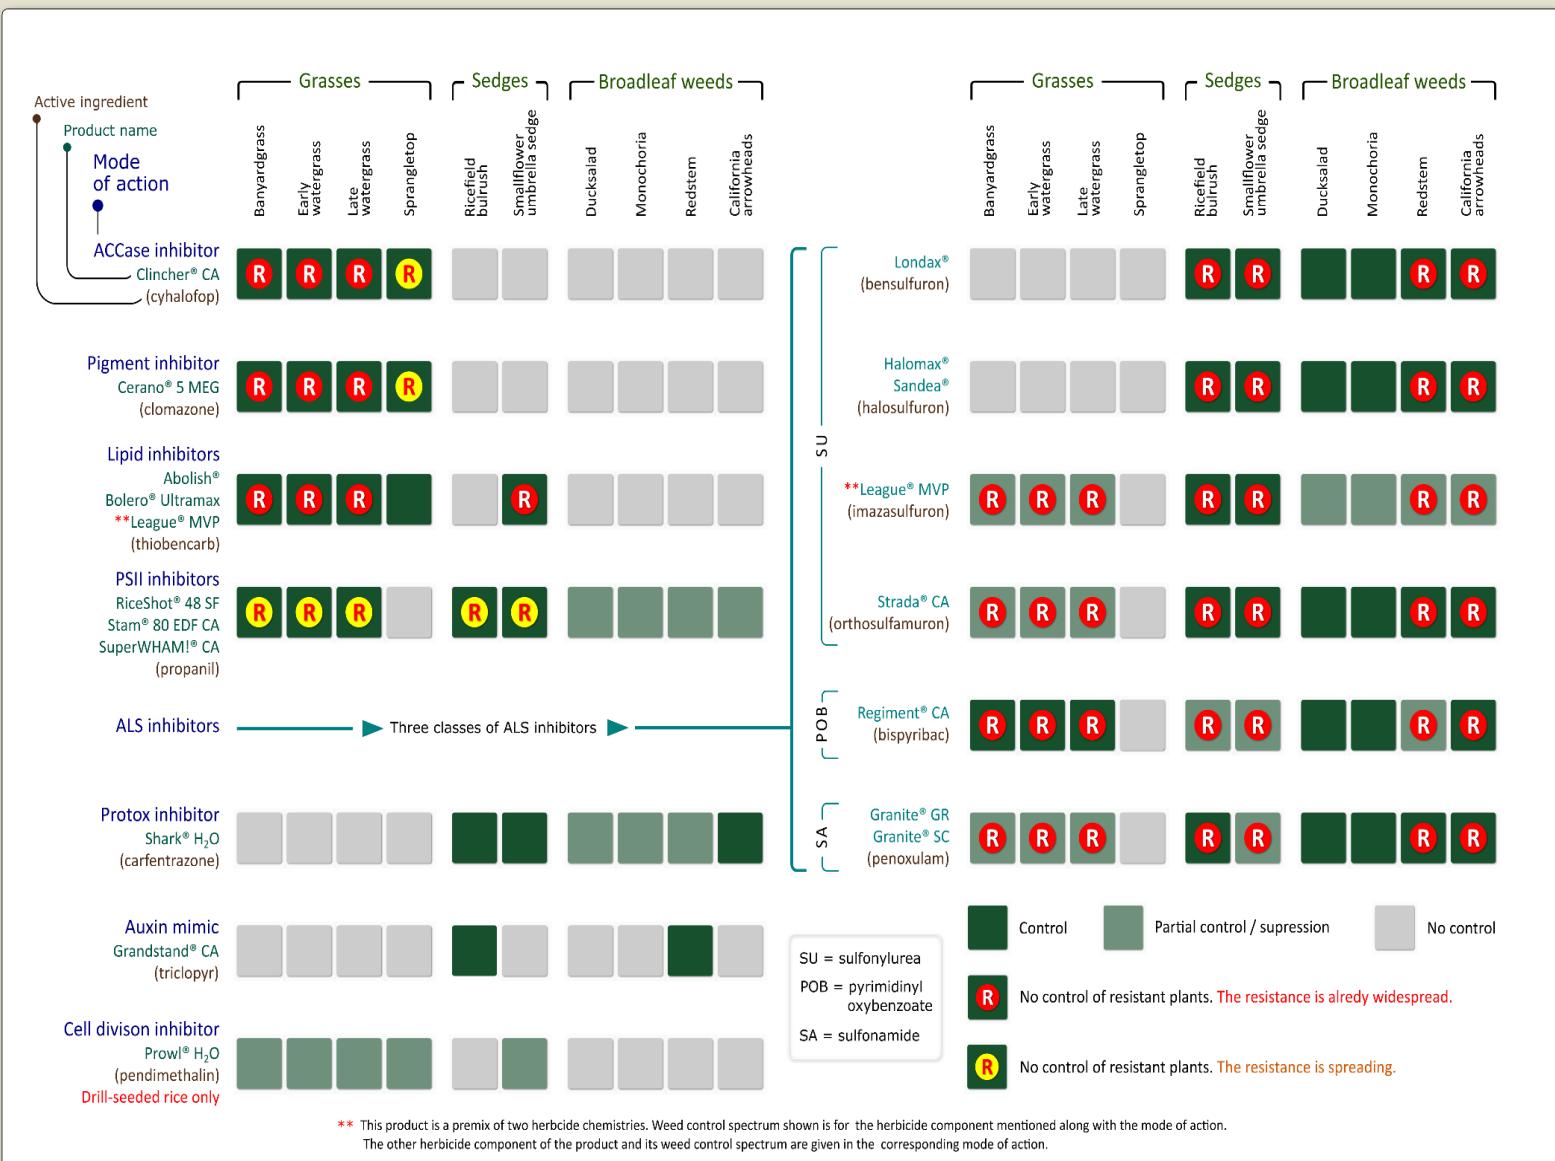

Herbicide	Applied to Foliage	Applied in Water	Timing
Abolish (Thiobencarb)	Yes	Yes	1-2 lsr

Barnyardgrass	8
Sprangletop	11
Total	61

- Majority of *Echinochloa* grasses are resistant to Abolish
- Both early watergrasses are likely resistant to propanil
- Abolish-resistant late watergrasses are also resistant to Regiment and Clincher. Surprisingly, they appear to be susceptible to Granite SC.
- All early watergrass and barnyardgrass are susceptible to clincher.
- Propanil resistance in late watergrass and barnyardgrass is not clear yet.

What to do about resistance

- Use integrated weed management practices as much as possible
- Be aggressive , reduce herbicide rate is not an option
- Apply herbicide to young actively growing weeds
- Use Multiple MOA
- Do not get locked into a standard herbicide program
- Consider rotational crop when it is make sense
- Find new herbicide with different mode of action

Butte efficacy in continuous flood system

Untreated control	---	---
Butte	7.5 lb	1 lsr
Butte	9 lb	1 lsr
Butte Grandstand + SuperWham + COC	7.5 lb 6 oz + 6 qt + 1.25%	1 lsr 1 Til
Butte Granite SC + COC	7.5 lb 2.8 oz + 1.25%	1 lsr 1 Til
Untreated control	---	---
GWN-9796 + Sandea	57 oz + 1 oz	1 lsr

COC = Crop oil concentrate. Concentration of COC was based on **% v/v**
@20 gallons per acre spray volume.

Knowledge for Good Weed Management

- Knowledge of the weed species present
- Knowledge of rice herbicide, their efficacy and behavior
- Knowledge of mixture and sequential treatments
- Knowledge of herbicide weed species resistance
- knowledge of herbicide mode of action
- Interactions with water management
- Good water management capability

Knowledge for Good Weed Management

- Compatibility to tank mix herbicide
- Avoid antagonism that may result in loss of control of injury to rice
- Proper adjuvants
- Knowledge of application requirement
- Environmental conditions

An aerial photograph of a large agricultural area. The landscape is divided into numerous rectangular fields, some of which are green and appear to be growing crops, while others are brown or dark grey, likely fallow or recently tilled. A network of roads and irrigation canals cuts through the fields. In the upper center, there is a cluster of industrial buildings, including several long white structures that look like greenhouses or大型仓库, and smaller blue-roofed buildings. There are also several tall, cylindrical blue storage tanks. A solar panel array is visible to the left of the main building complex. The overall scene is a mix of natural agriculture and industrialized food production.

Thanks!
